

DreamCoder: Growing domain-specific knowledge via wake-sleep program induction

Kevin Ellis

Collaborators: Catherine Wong, Maxwell Nye, Mathias Sablé-Meyer,
Lucas Morales, Armando Solar-Lezama, Joshua B. Tenenbaum

2020

Conceptual Abstraction and Analogy in Natural and Artificial Intelligence

The premise of program induction

1. Represent knowledge as programs: as symbolic code

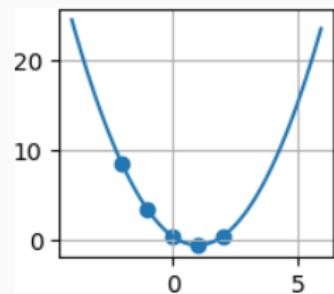

The premise of program induction

1. Represent knowledge as programs: as symbolic code
2. Learning=adding to that body of knowledge=
making new programs=program synthesis

Why program induction?

Why program induction?

strong generalization
+data efficiency

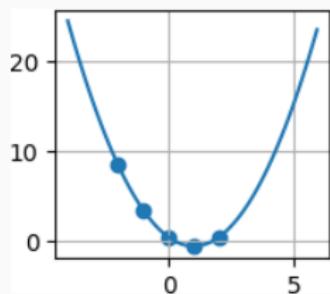

$$f(x) = (x-1)^{**2} - 0.5$$

Why program induction?

strong generalization
+data efficiency

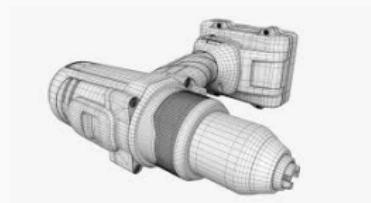

interpretability

$$f(x) = (x-1)^2 - 0.5$$

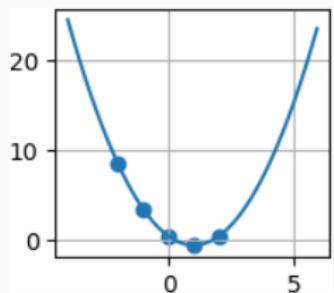

VS

Why program induction?

strong generalization
+data efficiency

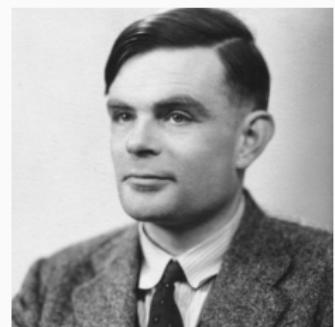

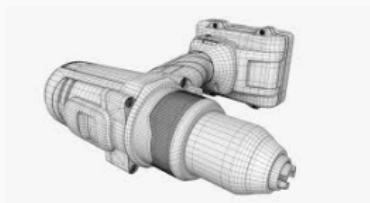

$$f(x) = (x-1)^2 - 0.5$$

interpretability

universal expressivity

FlashFill (Gulwani 2012)

EXAMPLE 3 (Directory Name Extraction). Consider the following example taken from an excel online help forum.

Input v_1	Output
Company\Code\index.html	Company\Code\
Company\Docs\Spec\specs.doc	Company\Docs\Spec\

String Program:

$\text{SubStr}(v_1, \text{CPos}(0), \text{Pos}(\text{SlashTok}, \epsilon, -1))$

FlashFill (Gulwani 2012)

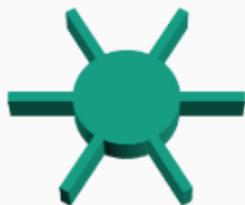

EXAMPLE 3 (Directory Name Extraction). Consider the following example taken from an excel online help forum.

Input v_1	Output
Company\Code\index.html	Company\Code\
Company\Docs\Spec\specs.doc	Company\Docs\Spec\

String Program:

$\text{SubStr}(v_1, \text{CPos}(0), \text{Pos}(\text{SlashTok}, \epsilon, -1))$

Szalinski (Nandi 2020)

(a) CAD model of ship's wheel

```
(Union  
  (Cylinder [1, 5, 5])  
  (Fold Union  
    (Tabulate (i 6)  
      (Rotate [0, 0, 60i]  
        (Translate [1, -0.5, 0]  
          (Cuboid [10, 1, 1]))))))
```

(b) Caddy program

FlashFill (Gulwani 2012)

EXAMPLE 3 (Directory Name Extraction). Consider the following example taken from an excel online help forum.

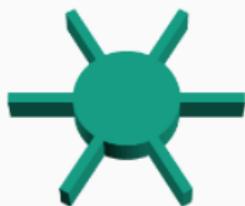

Input v_1	Output
Company\Code\index.html	Company\Code\
Company\Docs\Spec\specs.doc	Company\Docs\Spec\

String Program:

$\text{SubStr}(v_1, \text{CPos}(0), \text{Pos}(\text{SlashTok}, \epsilon, -1))$

String expr P	$\text{Switch}((b_1, e_1), \dots, (b_n, e_n))$
Bool b	$d_1 \vee \dots \vee d_n$
Conjunct d	$\pi_1 \wedge \dots \wedge \pi_n$
Predicate π	$\text{Match}(v_i, r, k) \mid \neg \text{Match}(v_i, r, k)$
Trace expr e	$\text{Concatenate}(f_1, \dots, f_n)$
Atomic expr f	$\text{SubStr}(v_i, p_1, p_2)$ $\text{ConstStr}(s)$ $\text{Loop}(\lambda w : e)$
Position p	$\text{CPos}(k) \mid \text{Pos}(r_1, r_2, c)$
Integer expr c	$k \mid k_1 w + k_2$
Regular Expression r	$\text{TokenSeq}(T_1, \dots, T_m)$
Token T	$C + \mid [\neg C] + \mid \text{SpecialToken}$

Szalinski (Nandi 2020)

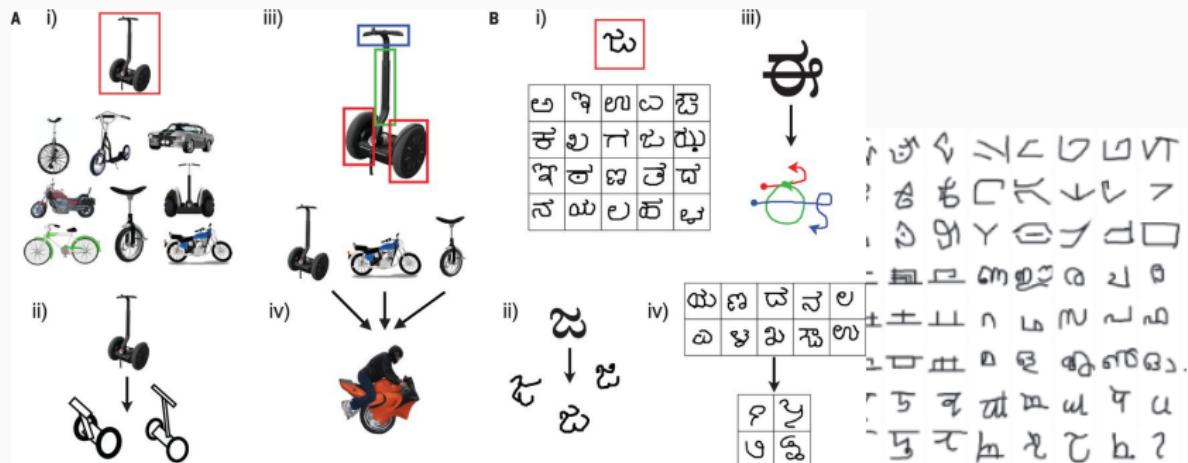

(a) CAD model of ship's wheel

```
(Union
  (Cylinder [1, 5, 5])
  (Fold Union
    (Tabulate (i 6)
      (Rotate [0, 0, 60i]
        (Translate [1, -0.5, 0]
          (Cuboid [10, 1, 1]))))))
```

Program Induction and learning to learn
learning a DSL
learning to synthesize
synergy between DSL+learned synthesizer

Learning to write code

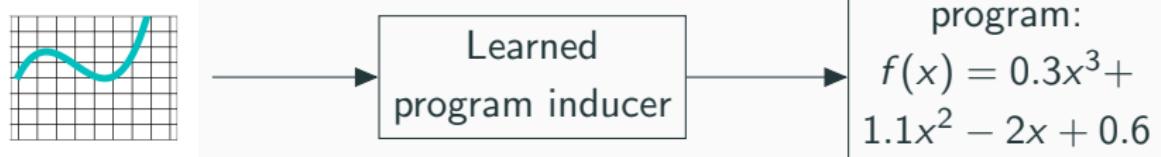

Goal: acquire domain-specific knowledge needed to induce a class of programs

- Library of abstractions (domain specific language)
- Inference strategy (synthesis algorithm)

Learning to write code

Goal: acquire domain-specific knowledge needed to induce a class of programs

- Library of abstractions (domain specific language)
- Inference strategy (synthesis algorithm)

Concepts: x^3 , $\alpha x + \beta$, etc

Inference strategy: neurosymbolic search for programs

Neural recognition model guides search

Neural recognition model guides search

Neural recognition model guides search

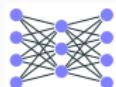

is a...

recurrent network (Devlin et al 2017)

unigram model (Menon et al 2013; Balog et al 2016)

Neural recognition model guides search

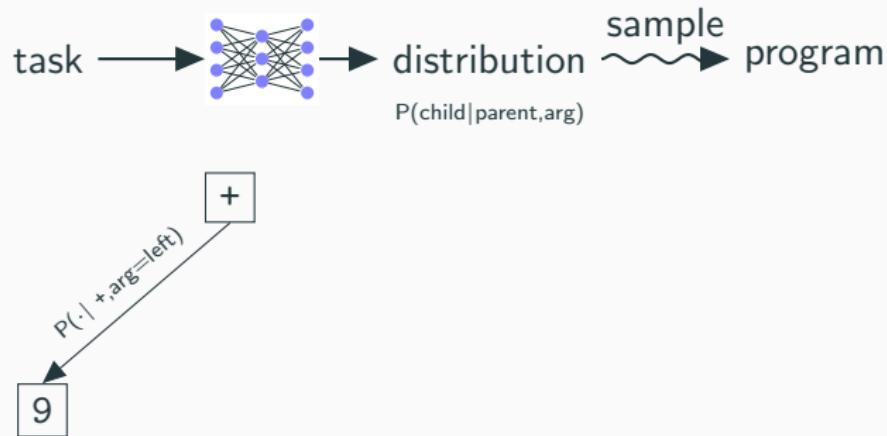

is a “**bigram**” model over syntax trees

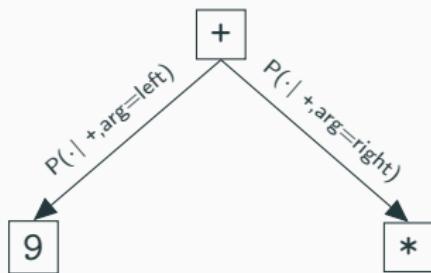

Neural recognition model guides search

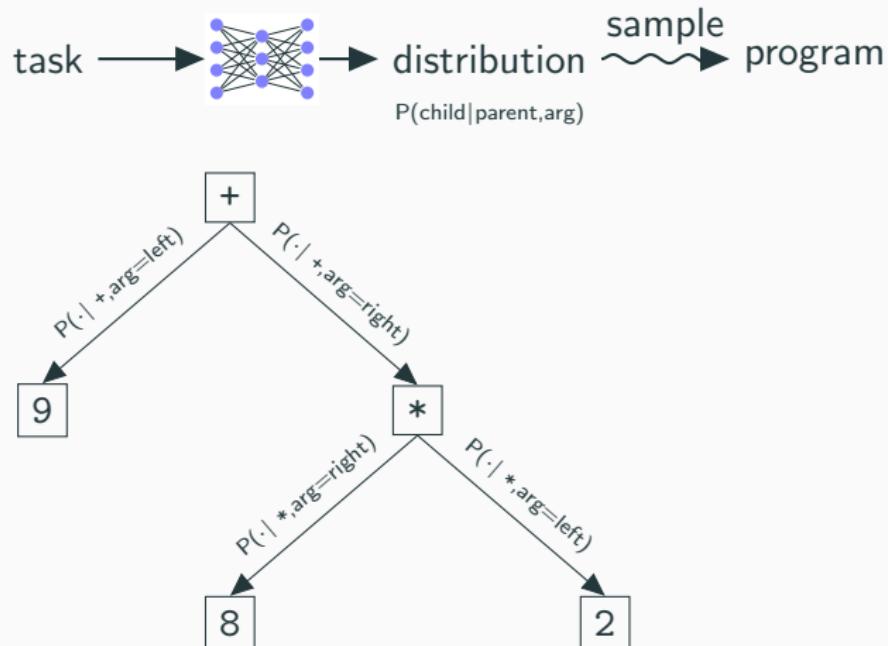

Neural recognition model guides search

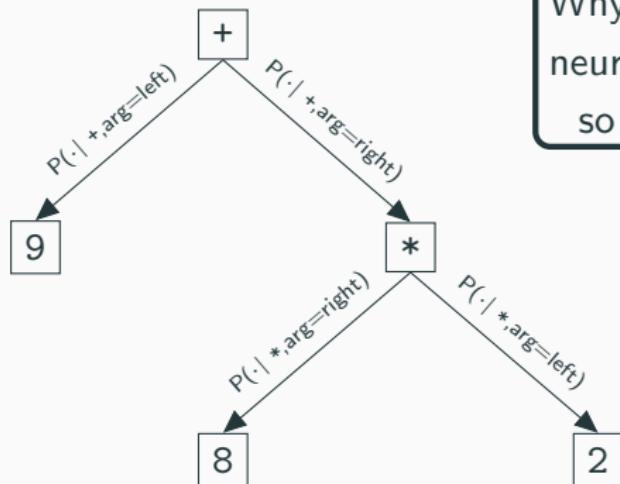

Neural recognition model guides search

Neural recognition model guides search

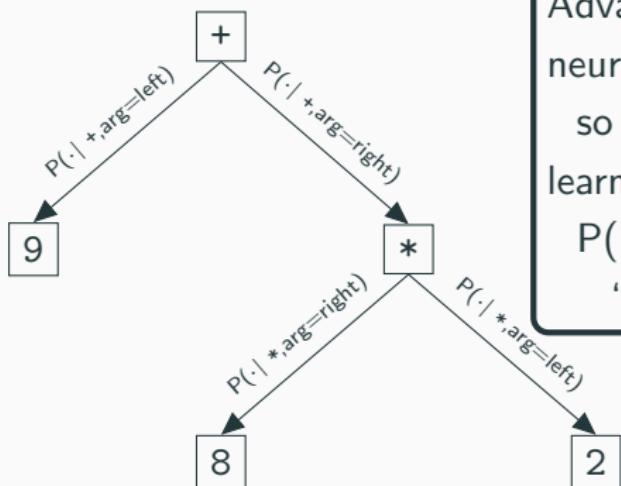

Neural recognition model guides search

Why we do this:
neural net runs once per task,
so CPU bottlenecks instead of GPU

Neural recognition model guides search

Advantages:
neural net runs once per task,
so CPU bottlenecks instead of GPU
learns to break syntactic symmetries:
 $P(1|*,\text{arg}=left)=0.0$
“do not multiply by one”

Origami Programming: Jeremy Gibbons, 2003

Growing a language for recursive programming

1 year of compute. 5 days on 64 CPUs.

Origami Programming: Jeremy Gibbons, 2003

Lessons

Symbols aren't necessarily interpretable. Flexibly grow the language based on experience to make it more powerful *and* more human understandable

Learning-from-scratch is possible in principle. Don't do it. But program induction makes it convenient to build in what we know how to build in, and then learn and adapt on top of that

3D program induction

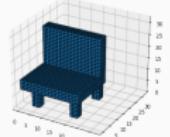

Challenge: combinatorial search!

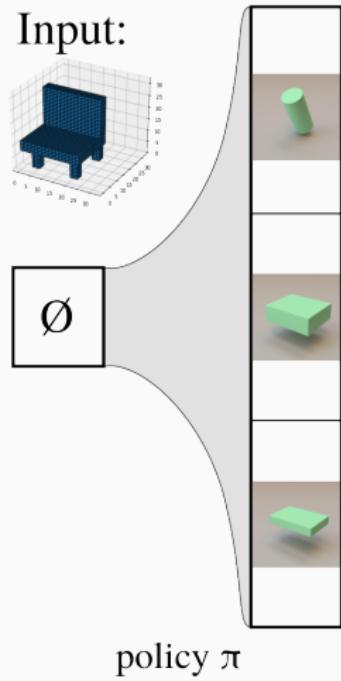

Branching factor: > 1.3 million per line of code, ≈ 20 lines of code
search space size: $(1.3 \text{ million})^{20} \approx 10^{122}$ programs

Solution: stochastic **tree search** + learn **policy** that writes code
+ learn **value** function that assesses execution of program so far;
analogous to **AlphaGo** [Silver et al. 2016]

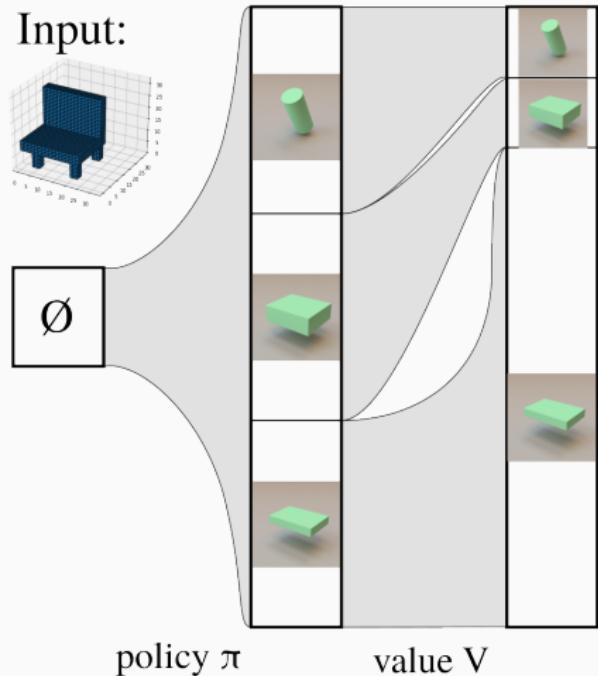

Input:

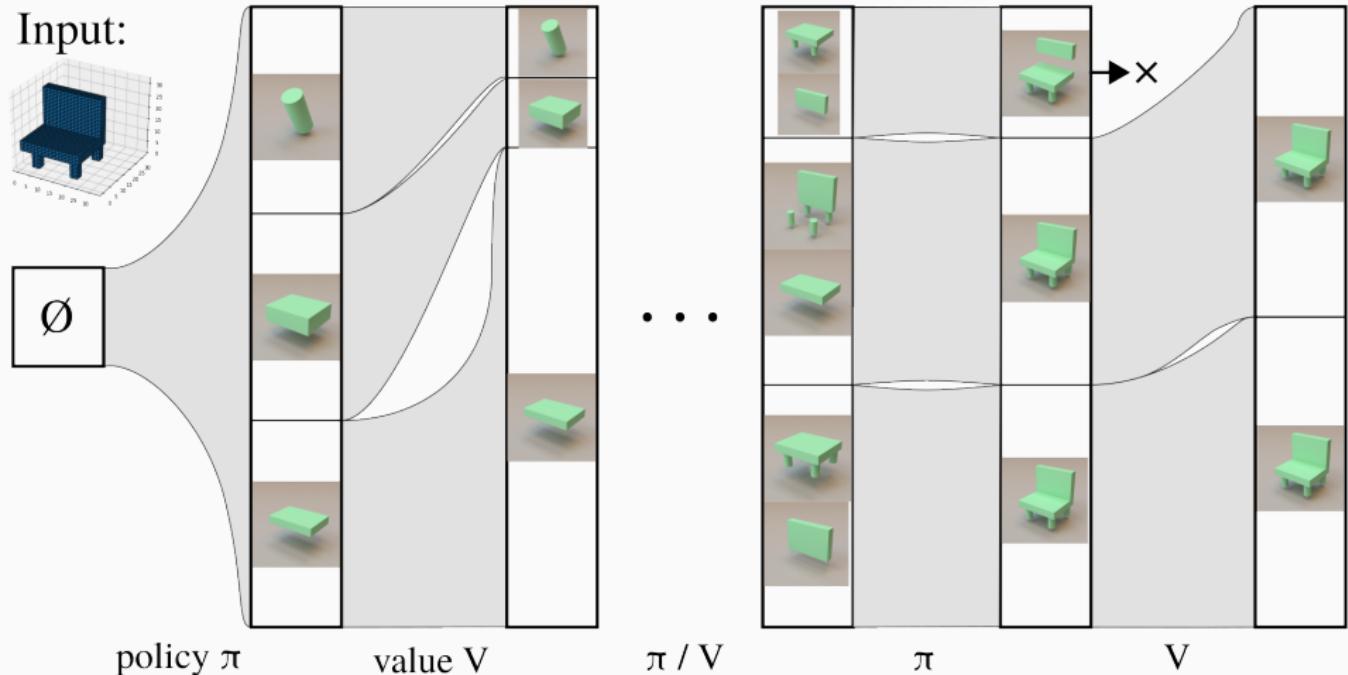

Solution: stochastic **tree search** + learn **policy** that writes code
+ learn **value** function that assesses execution of program so far;
analogous to **AlphaGo** [Silver et al. 2016]
